

Customer Shopping Behaviour Analysis

A comprehensive data-driven analysis of 3,900 transactions — uncovering spending patterns, customer segments, and strategic growth opportunities.

Project Overview

Scale of Analysis

3,900 customer purchases examined across multiple product categories and retail touchpoints.

Data Richness

18 key features captured — spanning demographics, purchase details, and behavioral signals.

Strategic Goal

Uncover spending patterns, define customer segments, and surface actionable business insights.

Dataset at a Glance

3,900

Transactions Analyzed

Across multiple product categories and demographics

18

Data Columns

Rich feature set covering behavior and demographics

44

Avg Customer Age

Representing a broad adult consumer base

\$59.76

Avg Purchase Value

Consistent spend across segments

3.75

Avg Review Rating

Out of 5 — above-average satisfaction

25

Avg Prior Purchases

High repeat engagement across the base

Revenue by Gender

Revenue Split

Male customers account for **\$157,890** — representing **67.7%** of total revenue generated across all transactions.

Female customers contribute **\$75,191**, or **32.3%** of total revenue — a meaningful gap despite comparable purchase frequency.

This disparity signals an opportunity to better engage female shoppers through targeted offers and product alignment.

Customer Segmentation

Loyal Customers

3,116 repeat buyers with strong engagement and consistent purchase history

Returning Customers

701 shoppers with moderate purchase history showing growth potential

New Customers

83 first-time or minimal-history buyers requiring onboarding focus

📌 The loyal segment forms the commercial backbone – retention strategies must remain the highest priority.

Top Performing Products

Highest-Rated Items Best-Sellers by Category

- Clothing: Blouse
- Accessories: Jewelry
- Footwear: Sandals

Top-rated products consistently deliver both high satisfaction scores and strong sales volume.

Gloves

3.86 / 5

Sandals

3.84 / 5

Boots

3.82 / 5

Subscription Impact

Non-subscribers generate **2.7× more total revenue** than subscribers — not because they spend more per order, but because they represent a far larger portion of the customer base. Average spend is nearly identical (\$59.49 vs \$59.87), pointing to a significant subscriber conversion opportunity.

Discount Strategy Analysis

Highest Discount Rates by Product

Product	Discount Rate
Hat	50%
Sneakers	49%
Coat	49%

Customers using discounts still spend **above average** — the current discount policy effectively drives volume without cannibalizing customer value. High-spending discount users represent a prime upsell audience.

Shipping & Purchase Behavior

Express Shipping

Average purchase value: **\$60.48**

Associated with higher-value orders and more engaged, confident buyers willing to pay for speed.

Standard Shipping

Average purchase value: **\$58.46**

Favored by budget-conscious shoppers — a \$2 spend gap signals different value expectations by segment.

Shipping preference meaningfully correlates with purchase amount and customer segment. Express shipping customers present a premium engagement opportunity worth nurturing.

Revenue by Age Group

Age-Driven Revenue Insights

- **Young Adults** lead at \$62,143 (26.6% of revenue) — the highest contributing segment
- **Middle-Aged** shoppers deliver \$59,197 (25.3%) with consistent, reliable spending
- **Adults & Seniors** contribute \$55,978 and \$55,763 respectively — stable but lower engagement suggests room for targeted activation

Age-based targeting should prioritize Young Adults while developing re-engagement programs for older segments.

Key Insights & Patterns

→ Demographics Drive Revenue

Male customers and Young Adults generate disproportionate revenue — demographic targeting should anchor marketing strategy.

→ Retention Is the Business Core

The loyal segment (80% of customers) is the commercial foundation — every retention investment compounds directly to revenue.

→ Margin & Quality Review Needed

Discount-heavy products (Hat, Sneakers, Coat) warrant a margin audit, while top-rated items (Gloves, Sandals, Boots) should be amplified to drive satisfaction and repeat purchase.
